

# FAHAD WISAM

Frontend & Full-Stack Developer · React Native Mobile App Developer

**Address:** Baghdad, Iraq **Phone:** +964 7721603705 **Email:** FhadWiesam@gmail.com

## Profile

---

Frontend & Full-Stack Developer and React Native mobile app developer, specializing in React, Next.js, and Vue.js to build dynamic, responsive web and mobile applications. I work across the full stack — crafting polished user interfaces and connecting them to backend services and REST APIs to deliver complete products end-to-end. Passionate about clean, maintainable code and thriving in collaborative, innovation-driven environments.

## Work Experience

---

### Frontend Developer — Fakhamat al-Dur

 06/2025 – Present ·  Baghdad, Iraq

#### 1. Toraq.iq — Car Rental Platform (App, Dashboards & Backend)

A full car rental platform for the Iraqi market: a customer app, control dashboards, and a connected backend.

- Built a complete car rental application to browse, book, and rent vehicles across Iraq.
- Developed admin and management dashboards for cars, bookings, users, and payments.
- Designed reusable, modular React components with fully responsive layouts.
- Integrated the frontend with backend services through secure REST APIs.
- Implemented advanced tables with filtering, search, sorting, and status tracking.

#### 2. Nexus-One System (Full-Stack)

An integrated management system built with a scalable, modular architecture.

- Developed the user interface and control dashboards using modern frontend technologies.
- Implemented role-based access control (RBAC) for different user levels.
- Built dynamic forms with validation and complex business logic.
- Connected the UI with backend systems via secure REST APIs.

#### 3. Internal Billing & Governance System (Confidential)

A complete internal platform for managing the company's financial operations.

- Built a full dashboard for managing invoices, payments, and financial reports.
- Implemented advanced tables with filtering, search, sorting, and export tools.
- Integrated role-based access control for admins/managers (RBAC).
- Developed complex forms with validation and dynamic logic, connected via secure REST APIs.

**Note:** *This system is confidential and cannot be shared publicly.*

#### 4. Multi-Dashboard System for Admins & Suppliers (Confidential)

A dual-dashboard system consisting of:

### Admin Dashboard

- Manage suppliers, products, approvals, inventory, and reports.
- CRUD for suppliers, categories, products, invoices, and tasks, with system analytics.

### Supplier Dashboard

- Suppliers can add products, manage stock, update pricing, and track sales.
- Fully modular React components with permissions and roles per access level.

**Note:** *The platform is private and protected by confidentiality agreements.*

### 5. Advanced UI System (25+ Screens)

A large UI project designed and developed using modern architecture.

- Implemented over **25 responsive pages** with optimized layout and design.
- Created a full set of reusable components (forms, tables, modals, filters).
- Ensured consistent UI/UX across all screens using Git branching and code review.

**Note:** *UI project is internal and not yet published.*

### 6. Fakhamat al-Dur — Official Company Website

Official website for a company specialized in marketing and discounts.

- Built Home, About, Services, and Contact pages focused on marketing and discount offers.
- Improved loading performance and SEO metadata.
- Ensured responsive and cross-browser compatibility, integrated with backend when required.
